● 01 WHERE I'M COMING FROM

I moved from Taiwan to Vancouver at sixteen — alone, no English, no financial safety net, no one to call. I worked multiple jobs, taught myself the language, earned my way into UBC, published research, and built my citizenship from scratch. I also spent time solo across 7 countries in Europe — not tourism, but deliberately going to unfamiliar places alone to reconnect, think, and grow.

That's not a backstory. It's the operating system I run on: find the gap, build the thing, measure if it worked. Every role I've taken since has followed the same pattern — I show up somewhere with missing structure, figure out what's actually broken, and leave it running better than I found it.

● 02 HOW I THINK

Hypothesis-first

I start with a guess, then design the smallest test that could prove me wrong. Trained in research, I don't reach for a solution until I understand what I'm actually solving.

Operator instincts

Good ideas only matter if they survive real constraints, real clients, and Monday morning. Ten years across retail, healthcare, and startups taught me that.

Industry-agnostic

Research, healthcare, startups, retail — different environments, same underlying problems. I'm more interested in the pattern than the label.

● 03 A WEIRD PROBLEM

MLH Crypto Tracker

Hackathon project → turning signal into context

I noticed every alert could tell me what happened, but almost none explained why. I built a Python + Gemini workflow that connected scattered signals into context.

The project wasn't about crypto. It was about a real information problem: noise everywhere, explanatory layer nowhere. I built the why-engine. That's the part that interested me.

Python

Gemini AI

● 04 RECEIPTS

\$5M → \$8M

revenue scaled at noissue
without added headcount

TOP 20

nationally at Aritzia
among 10K+ associates

70+ DOCS

investor due diligence
Qu Biologics, 40% faster ramp

Cell Reports

published research, 2023
BSc Nutritional Sci + Kin,
UBC

7 COUNTRIES

solo across Europe
FR · DE · IT · GR · UK · DK
· NL

● 05 NATURALLY CURIOUS ABOUT

Why organizations struggle to see themselves clearly

Where healthcare and tech create gaps nobody owns

Why smart people make predictable, irrational decisions

Why systems work beautifully—until humans enter them

How AI changes what expertise actually means

● 06 WHY CONSULTING → WHY W(A)

I'm not exploring consulting. I've been doing it without the title — dropped into broken systems, figuring out what's actually wrong, building the fix, and moving on. The work has always been strategic. The label just caught up.

W(A) specifically — because Sean wrote that the moment you think you're an expert is the moment you stop seeing clearly. I moved to a country at 16 where I knew nothing. That turned out to be an advantage. I've been chasing that beginner's clarity ever since — in research labs, healthcare teams, startups, and now deliberately, in rooms with people who know more than me and expect more from me. That's what W(A) looks like from where I'm standing.
